I'm a UX designer with about 3 years of experience in Thai fintech and cloud products, currently working on an everyday payment product, Paotang Pay, by Krungthai. Known for my exceptional performance, I excel in advocating user-centered design solutions, delivering intuitive user experiences that enhance customer satisfaction and align with business goals.

📍 Bangkok, Thailand

KEY COMPETENCIES

Active Learner	Collaborative Team Player	Stakeholder Negotiation
Critical Thinking Skills	Practical Thinking skills	Decent Communication Skills
Usability Testing	Heuristic Evaluation & Flow Audits	AI-assisted UX Workflows

PROFESSIONAL EXPERIENCE

User Experience Designer (UXD)

at Arise by INFINITAS (Paotang) Full-time | May, 2025 - now

- Take ownership of the UX in Paotang Pay, Paotang's everyday-payments product, from requirement analysis and flow audits to sign-off and developer handoff.
- Apply UX methods such as heuristic evaluation, concept testing and A/B testing to help validate concepts and wireframes, ensuring a user-tested experience before handoff to development sprints
- Collaborate closely with POs to reach the best solution within tight timelines, technical limits and legal requirements, and help negotiate with business units on UX-critical matters (e.g. core concept, information hierarchy per user group) where needed.
- Lead the attendee experience for Arise's AI Tech Meetup Nov, 2026 (currently progressing): defining target audiences, mapping the journey from awareness to registration to arrival, and designing the registration flow and event communications with the CorpX.
- Currently working on developing an AI agent (Claude skill) that groups users and generates personas from provided data, to speed up UX research work and help stakeholders align on the same target users.

Service Design and Research Volunteer

at Thailand Development Research Institute (TDRI) Part-time | Jan, 2025 - Sep, 2026

Policy research on preventing urgent/unplanned dialysis for chronic kidney disease (CKD) patients in Thailand; *placed as 1st Runner-up, Optimal Collaborative Research Excellence Award 2026 and a finalist, Service Design Award 2026 (results pending)*

- Brought design thinking and a user-centered approach to a health-policy research project by applying Double Diamond and Experience-Based Co-Design (EBCD), ensuring that the proposals reflected the real experiences of both patients and healthcare professionals.
- Conducted in-depth interview sessions with CKD patients, nephrologists and nurses, then synthesised the findings into an end-to-end as-is patient journey map highlighting pain points and underlying system issues from both sides, which became the evidence base for the later workshops in the research process.
- Facilitated two multi-stakeholder co-design workshops with CKD patients, nephrologists, nurses, policymakers and academics:
 - Workshop 1 (journey validation): validated the as-is patient journey and opened discussion across groups, helping each stakeholder see the problem beyond their own role and agree on a shared ideal vision for CKD care.
 - Workshop 2 (design critique): presented synthesised insights from Workshop 1 alongside early concept mock-ups addressing key challenges in the treatment journey. Stakeholders evaluated the pros and cons of each concept, giving the team a stronger basis for prioritising policy solutions.
- Owned the chatbot assistant proposal, one of the prioritised policy solutions: designed patient–nephrologist communication features and screen mock-ups, and helped prepare the proposal's presentation to government stakeholders at TDRI's public seminar.

UX Designer

at NIPA Cloud Technology Full-time | Feb, 2022 – May, 2023

- Owned UX for most features of NIPA Cloud's web portal: user flows, UX writing, and iteration with the PO and developers.
- Led focus groups, usability tests and A/B tests with interactive prototypes for the new Admin Portal.
- Assisted Team Lead in effective task management, contributing to seamless task allocation within the team.
- Contributed to design system v2.1 with documented, reusable Figma components.

EDUCATION

MSc Human-Computer Interaction

Newcastle University, UK — from Sep, 2023 - Nov, 2024
Grade : Distinction

B.Arch Industrial Design

KMITL, Thailand — from Sep, 2019 - Nov, 2021
Grade : 1st Class Honour

SPEAKING & COMMUNITY

Speaker of "Designing for Inclusivity: The Paotang Experience"

for Company visit by University of the Thai Chamber of Commerce students, at Arise by INFINITAS — Sep 2025

Co-MC, Arise DX AI Tech Meetup

Co-hosting a public tech meetup on AI-powered Design by DX Team at Arise by INFINITAS — Nov 2026 (upcoming)
